

SAP Business One

Effective solution integrates between headquarter and subsidiaries

Large corporation and MNC find that some headquarter ERP are too complex to adapt to the unique requirements of their subsidiaries.

Connectivity with the business network

SAP Business One provides a robust integration framework and various preconfigured integration packages are available to enable customers to quickly and affordably connect SAP Business One with other applications running in headquarters, subsidiaries, distributors, and trading partners.

Thus, SAP Business One provides a feasible alternative for subsidiaries to meet local needs and follow to their headquarter requirements, eliminate the complexity of ERP implementation and get more value with minimal investment.

Single application, Full functionalities

In a single application, SAP Business One offers support to manage the entire business across financials, sales, customer relationships, purchasing, inventory, and operations, with integrated reporting and analytics. It is one of the only complete and integrated world-class enterprise resource planning (ERP) solutions that truly fits the budgets of SME.

Benefits

- A single software system with comprehensive functionality
- Integrated business intelligence functionalities for self-serve analysis (Built-in XL Reporter and Crystal Report)
- User friendly interface reduces training time
- Minimal ongoing IT Support
- Configurability and extensibility with a published software development kit (SDK)
- A true global solution, available in 40 country-specific versions in 25 different languages
- System lifecycle support to provide support for implementation and upgrades
- Fast Implementation with average lead times of only 2-8 weeks
